Bill,

I'm a little confused about communication lines for the transfer of this data to the State. I am told that Michael Ortiz is the person within NMED that we should be working with for the data review and interpretation. Have you reached out to him to get these answers because he has been working closely with our CHPs to review the data.

Does this warrant a phone call or do you want to work with Mr. Ortiz to understand the qualifiers? Please advise.

Hi Eric,

In trying to understand this data I put it into a report which looks somewhat like the report we are using for our data (non-scribe). It would help me tremendously if I had the **validation narrative** as well as **descriptions** of some of the **codes** used.

Some of my specific difficulties are in understanding the meaning of the **Lab Qualifier** codes and the **Result Qualifier** codes. By the way, it appears the content is switched; the Result Qualifier looks like analytical lab qualifiers and the Lab qualifiers are either INV, OK or blank.

I also don't know if these values have been blank corrected. Curiously the lab result for the blanks is blank.

Is there an EPA person responsible for this data whom I could chat with?

What were the objectives for this data collection?

Would you like to see a copy of the access report object output I'm working on?

Bill

Subject: Las Conchas Wildfires Scribe Publish

Data sets 11-07001; 11-07013; and 11-07023 have been published to Scribe. Please note, strontium-90 data was received for two samples in data set 11-07023 over the weekend. This data is being reviewed by the CHP. An EDD including the strontium data, only, and a revised validation narrative will be sent out. This data will be published to Scribe after review.

Thanks,
Kristie
